Medlin Communications, Inc. Participates in the Consulting Electrical Engineers 8th Annual Technical Forum & Tradeshow

On Monday, May 2, 2011, at the Union League Club of Chicago, Medlin Communications invested a day in helping electrical engineers, designers, project managers and architects, to learn about key aspects of business communications technology. Medlin also participated in the forum's networking and educational venue to learn more about current LEED-related efforts to help manage electrical usage and make the most of every dollar spent on energy. Many companies exhibited solutions to help their customers "go green" by using less energy. Medlin is deeply committed to employing LEED innovations to help their clients sustain successful businesses.
